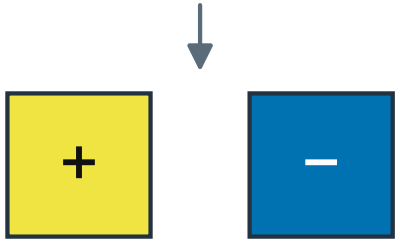
Schematic: exact charge balance does not freeze occupancy

Frozen winner: exact Q, variable M

global $Q = N_+ - N_- = 0$ exactly

$M = N_+ + N_- + N_{\text{bound}}$ may change



Balanced pair creation changes M by +2 without changing Q

Exact-Q+M sibling

global $Q = 0$ and $M = M_{\text{initial}} > 0$

The same number of occupied cells is retained

Reactions still occur, but total M is fixed
